UNIVERSAL GAUGE WITH EXTRA-LONG MEASURING ARMS

Measuring arms of length 200 mm are now available for the standard Universal Gauge. The new measuring arms can be used for both internal and external measurement and are particularly useful for deeper internal measurements or for bridging high spigots and shoulders. Extra stability is provided by a rear support strut and standard depth stops can be fitted just as for standard length measuring arms.

Universal Gauge standard features :

- Range 30-250mm internal / 0-215mm external
- 15 mm anvil travel
- Constant measuring pressure
- Digital or mechanical readout
- 150 mm and 500 mm extensions available
- Measuring table and supports available for conversion to bench gauge for the measurement of small components.

For prices and further information, please contact Alan Corner at Bowers Metrology in Bradford, England.
